PROFILE

I'm a software engineer with three years of experience in the field of web application development. I have been mainly working on front end development with scalable frameworks, with knowledge of some backend technologies. Adept at agile development process with an urge for scale, performance and architectural elegance. Now looking for opportunities to develop myself and my career by working on different environment and technologies.

My job responsibilities mainly include working with front end development but I have acquired enough skills to present myself as a full stack developer as I have had opportunities to oversee projects throughout it's full life cycle.

EXPERIENCES

Full stack development

Determine business needs and desires by gathering and analyzing information from clients, partners, sales and operations, deliver user-centric results and effectively communicate my insights and plans to cross-functional team members and management

Managed projects from concept to design, design to prototype (UI/UX ready), technical implementation, maintenance and promotion of the applications, monitor deliverables and ensure timely completion

Developed and deployed restful-api and microservices.

Developed and deployed eCommerce web application.

Managed the project for maintenance and test automation from both SQA and Developer perspective.

Familiar with deployment process and source control for production ready application.

SELISE rockin' software - Software Engineer

March 2018 - Present

SELISE rockin' software - Intern

December 2017 - February 2018

PROJECT

Private Wealth Solution

Developed a digital partner portal for a Swiss-based Private Wealth Solutions company, creating a paperless system for partner banks. Solutions included digital forms, e-signature implementations, document management, communications etc.

It also extend to complex Customer relationship management(CRM) digital solution for both business to business (b2b) and business to consumer (b2c).

myKachaBazar - A eCommerce solution

A eCommerce website using angularJS and node as backend to design rest-api microservices, which is fully customizable by end user.

Genshin Impact Tools

A hobby project I'm currently working on built with latest angular version. The idea is to create tool to make my life easier with the game.

The full description of the project and it's future plan is listed on the website.

Shopzoon - A eCommerce Solution

A eCommerce website using Java, JSP, JSON, Javascript & Hibernate technology.

This is a university project that focused on learning the technologies mentioned.
