PROFILE

I'm a software engineer with three years of experience in the field of web application development. I have been mainly working on front end development with scalable frameworks, with knowledge of some backend technologies. Adept at agile development process with an urge for scale, performance and architectural elegance. Now looking for opportunities to develop myself and my career by working on different environment and technologies.

My job responsibilities mainly include working with front end development but I have acquired enough skills to present myself as a full stack developer as I have had opportunities to oversee projects throughout it's full life cycle.

EXPERIENCES

Full stack development

Determine business needs and desires by gathering and analyzing information from clients, partners, sales and operations, deliver user-centric results and effectively communicate my insights and plans to cross-functional team members and management

Managed projects from concept to design, design to prototype (UI/UX ready), technical implementation, maintenance and promotion of the applications, monitor deliverables and ensure timely completion

Developed and deployed restul api and mircoservices.

Developed and deployed eCommerce web application.

Manged the project for maitenece and test automation from both SQA and Developer perspective.

Fimiliar with deploment process and source control for prduction ready application.
